

WHAT

- What is already available?

MLK1101 Supportive Housing Lorcan O’Herlihy Architects Los Angelus, California
- 26-unit of permanent, affordable housing
 - LEED Gold design

- Elements that work well:

 - “Open the building towards the street and foster a sense of community within the neighborhood” 🏡
 - “The goal of the two retail units at the street level, is to generate income... while providing training.”
- Elements that do not work well:

 - LEED criteria played a more significant role in the design and ammenities (i.e. electric car port, etc)
 - Only provides retail training
 - No on-site access to health services 🏥
 - Building does not fit with surrounding neighborhood

- Wheeler Mission Ministries
- Open 24hours
 - Has different locations and facilities

- Indianapolis, Indiana
- Elements that work well:

 - Building does fit with the surrounding neighborhood
 - Provide job assistance
 - Provides addiction recovery services. 🏥

- Elements that do not work well:

 - Requires occupants to attend religious services in order to receive shelter
 - Homeless are not integrated in the society 🏡
 - Appointments are required for some facilities

- Dignity Village
- Open 8am - 10pm
 - Membership based

- Portland, Oregon
- Elements that work well:

 - Based of the minimal needs of homeless
 - Shared living spaces 🏡
 - Welcomes couples and pets
 - Supports individual choices and fosters dignity

- Elements that do not work well:

 - Buildings do not fit with the surrounding neighborhood 🏡
 - Does not provide health services 🏥
 - Waitlist

- HUD Rapid Re-housing
- Has different locations and facilities
 - YMCA is one sub-organization that provides housing and other services

- Elements that work well:

 - Houses people quickly and assigns a case manager 🏡
 - Provide job assistance
 - Provides addiction recovery services 🏥

- Elements that do not work well:

 - Locations vary on ammenities and services provided 🏥

- Weingart Facilities
- Access center open M-F 7:30am - 6pm
 - Has five different buildings currently in plan or construction phases

- Los Angeles, California
- Elements that work well:

 - Provides housing and case management 🏡
 - Provide job assistance
 - Provides addiction recovery services 🏥
 - Provides access to transportation 🚗

- Elements that do not work well:

 - Some facilities not available yet 🏡
 - Some facilities not updated or clean

WHAT

What does the quantitative data and studies say homeless people need and how to address homelessness?

- Early intervention

Stable housing

Transitional living

Clean spaces

Social support

- Intensive and prolonged help

Social stability and therapy

Integration in the community

- “The mission of the drop-in center is to **provide a safe, clean space; support; and services** for homeless communities in the Mission District.” (pg.310) 🏡
- “Support services include **case management, support groups, psychotherapy, and psychiatric care.**” (pg.311) 🏥

- “Services Provided (Funding Source)

Confidential HIV counseling and testing (in-kind)

Technical assistance and support for the health clinic and a part-time nurse practitioner (in-kind)

Drop-in dental care (SFHSA and in-kind)

Acupuncture and other wellness services (SFHSA and in-kind)

One full-time case manager/substance use specialist (SFHSA)

Clinical supervision and training to the case manager/mental health specialist and technical assistance and training on mental health issues (in-kind)

Two full-time therapists, one half-time psychiatric nurse practitioner, and a psychiatrist four hours a week (began in-kind, now California endowment)

Clinical supervision for therapists (California endowment)

Hygiene supplies (in-kind)

Syringe exchange services (in-kind)

Chair massage (in-kind)

Hot meals (in-kind)

Technical assistance and training on leadership development and SRO-related issues and opportunities for community building and organizing (SFHSA)

Component	LEHT	CIA	SBCM	STRIVE	Street smart	AUSOP
Frame on the issue and measurement of current status	Current problems reflect failures of service system, family & youth. Assess each domain	Coal: 1 happens and decrease substance use; Assessment includes: enhancing motivation, gathering background & substance use information, & functional analysis of risk acts	Validates + normalize experiences & feelings. Evaluate strengths & corner: functioning in multiple life domains	Family has poor conflict resolution skills; Increased skills will reduce risk	Prioritizing life goals requires a decrease in risk acts; evaluates risk knowledge, attitudes, & behaviors	Youth must assess and utilize resources; must know youth where they are
Theory/model	Household/ Family Preservation Model	Behavioral theory-contingency model	Strategic theory	Social learning theory	Social learning theory	Subculture-specific outreach model
Information/ education	Parents: limit-setting & monitoring; address dysfunctional interactions; 1 strategies to decrease substance use	1 Protection strategies & health-focused strategies aimed at increasing contingent reinforcement	Normalize behaviors; 1 protection strategies; discourage behaviors consistent with personal goals	1 Strategies aimed at conflict resolution	1 Protection strategies	1 Education aimed at specific youth subcultures
Coping Skills	1 Problem-solving, communication skills	Revisit positive behaviors, punish or ignore negative behaviors	1 Problem-solving, identify personal goals	1 Problem-solving, including feelings, thoughts, & actions	1 Problem-solving, including feelings, thoughts, & actions	1 Access and utilization to prevention services
Social support/ relationships	Improve relationship with parents & other key individuals or support change	Involve “concerned others” in the intervention & encourage positive social activities	Build strong relationship with the case manager, non-deviant peers, & supportive adults	Improve relationships with parents/ guardian & family members	Relationships with group members & the facilitator reduce risk	Relationship with outreach worker will increase service utilization
Environmental barriers	Mobile resources of service system	Lack of reinforcement for positive changes	Replacing “outgroup” niches that do not support the child’s acculture & grow with supportive settings	Develop a referral method for early access to resources	Provide access to ongoing health care, STD treatment, & condoms	Access to acceptable forms of intervention that fit with the subculture on the street

- “These programs consistently support the notion that **homeless youth are in need of intensive and prolonged help.**” (pg.82) 🏡
- “The structural components of the intervention are all quite similar: **health and mental health services.** These services at best can only provide short-term support. The next generation of programs may benefit from... long-term supports provided: Pathways out of homelessness are needed.” (pg.83) 🏥

This article compares six different programs, all of which focus on the prevention of HIV within homeless youth and adults. The authors summarize the factors and focuses of each program along with the intended audience of each program, such as the youth, parents, or both. The article identifies common elements between the six HIV prevention programs and outlines significant elements in addressing issues in the homeless communities, such as social support or relationship building and addressing environmental barriers. Ultimately, the article identifies similarities and differences between the six youth prevention programs and potential elements that can be adopted in other programs that focus on improving the lives of homeless individuals.

Comparisons of Prevention Programs for Homeless Youth
Arnold EM, and Rotheram-Borus MJ. "Comparisons of Prevention Programs for Homeless Youth." Prevention Science : The Official Journal of the Society for Prevention Research, vol. 10, no. 1, 2009, pp. 76-86., doi:10.1007/s11211-008-0119-4.

WHAT

What does the qualitative data says homeless people need and how to address homelessness?

- Address negative perception

Help

Love

Access to services and facilities

Identification

Understanding
- The Crib provided a place for homeless kids to stay while creating a support system for them and making a family4 🏡 🏠

- 🏡 A schedule where they eat together as a family2

🏡 “Sometimes you just need to show them unconditional love”1

“Part of what prepares youth to feel competent is a feeling of control, autonomy, and empowerment.”
- 1) The Homestretch

2) Food and housing is all some individuals need to improve their situation

3) An individual can thrive within the system when give the opportunity, such as placement in transitional housing, and given the means to succeed (support)

4) The program must consist of safe and clean areas that promote community along members. Areas for members to eat together as a family are significant.

- 🏡 “A study among homeless young adults suggested that social networks, economic factors, and future expectancies are significant predictors of the level of substance use.”
- 🏡 Of those who sleep in the streets, many sleep in lighted areas for safety reasons

- “Hide the homeless”

It’s easier to talk about and address when they are faceless and nameless
- 🏡 When on the streets, they form groups and communities

🏡 They create their own families

🏡 Being homeless is about surviving, and this pain often leads to using

🏡 There is a community among homeless groups
- To Belong

A Family

A Support System

A Community

- 🏡 Being homeless is about surviving, and this pain often leads to using

🏡 There is a community among homeless groups

Not everyone you see looks homeless; Perception is significant to those who are homeless and in architecture

COT Force is one of the most effective programs in getting people off the streets

Money plays a significant role; The budget for homeless youth is very small

Most homeless kids have home situations that have caused them to become homeless

- 🏡 Of those who receive spots in programs and living programs, some return to the streets due to limited support or the families they created who are still on the street.

- 🏡 Homeless kids have limited access to facilities and identification

WHAT IF

- Speculations

If facilites and services are more accessible

Dignity, not “Hide the homeless”

Allow individuals to make their own choices

Being homeless is a situation no one wants to be in, it is not a choice. It is a consequence of unfortunate events that happen over time, usually starting with once losing their job.

The people we see on the streets are the ones who no longer hide the fact that they are homeless. But in most cases, the person who is homeless could be anyone.

- If homeless people are integrated into the community

Updated and contextual architecture that fits within the existing neighborhood

A large majority of homeless centers and shelters do not fit within the surrounding neighborhood. 🏡

Most newer facilities are extremely modern and both do not match the existing context as well as the needs of the occupants. For example, the MLK1101 building is a large white modern building with extreme shape and slope designs, whereas the surrounding buildings share features of beige and tan colors with brick work and concrete. This facility is also LEED certified, which altho is sustainably beneficial, it contains features required to meet certification but are not necessary for the occupants. Instead money and spaces could have been designated for other beneficial uses.

Creating a clean, ‘nice-looking’ place sends the idea that the homeless deserve support and respect. Not something ‘dingy and dirty’, dark, and unwelcoming. 🏡

If a building is dirty looking and stands out, many members of the surrounding community are not going to support it. They want a building that looks like it fits into their town. Something clean and contextual. 🏡

This is not only essential to the members of the surrounding neighborhood, but to the occupants as well. Just because they are homeless does not mean they do not deserve a clean, nice space to live in. They are humans too. They have the right to clean, safe, accessible housing. They have the right to decide who they want to live with. And they have the right to receive basic ammenities and support from the community. 🏡 🏥 🏡

When a person becomes homeless, they suddenly become undignified, not respected, viewed as incompetent, incapable, dirty, and that they are chosing to be homeless. The development and creation of clean, contextual architecture with the necessary programs and services to provide help can also help to change the perception of others and give homeless people their dignity back.

- If there are places for basic hygeine and safety necessities such as access to showers, lockers and bathrooms

Community support

Integration into the surrounding community is essential to those living in the homeless facilities as well as those living around it. 🏡

Creating a clean, ‘nice-looking’ place sends the idea that the homeless deserve support and respect. 🏡

Not only does this go back to the concept of dignity, but it sets up a foundation for integrating members back into society.

Many homeless people struggle with being integrated into society due to lack of accessible ammenities, including showers, but also lack of skills and trades, which makes finding a job difficult as well. 🏡

WHAT IF

- Speculations

If people help and support homeless people
- The city of Portland Oregon provides support and help to homeless people that considers both the data and the people.

- Dignity village provides spaces for people and promotes individual choices and decisions.
- Designated spaces for encampments and health services

Although many centers and facilities do offer access to clinical and health services, substance abuse, education and job training, an case management. Most, if not all, of these services are either located in different facilities or housed by different organizations completely. Either way, physical access to the services are limited to those who struggle with access to transportation, identification, financial support, and/or insurance. 🏥

Encampments should range in medium to large sizes to accompany all of the homeless people, especially during the colder months. This will also help with wait times as many shelters and camps can only accept a few people or have to put many on a waitlist. 🏡 🏠

The designated spaces should be in close proximity to local services which are open 24 hours, as well as lin close proximity to local transportation. Local transportation is essential to homeless people to get around as many do not have access to other long distance transportation besides walking or biking. 🏡

These encampments should on-site clinical and health services, such as therapy, substance abuse, recovery and addiction services, along with food, clothing, education, work, and case management services. 🏥

Occupant usage of essential services is increased if accessible on-site and near housing facilities are available. The idea is to limit the need for transportation to these services by providing on-site services. 🏥

- If there are places for large groups to live together

Places for groups and families to stay together

Most shelters do not allow couples to stay together, or for people to keep pets 🏡

Many people who live on the streets together live within small groups, as couples, or with pets 🏡

Rather than large individual rooms or units with a kitchen and tv and ‘everyday luxuries’ homeless people need to have the ability to choose who they live with. These environments would foster dignity and promote independence rather than limit homeless communities. 🏡

A key element to the success of addressing homeless is through the remediation of architecture, which includes developing spaces that promote community and creating communal spaces that fit the needs of the existing groups of homeless, not just individuals. 🏡

Rhetorical

Key Claims: Health services should be incorporated into housing

Current available centers do not have access to all necessary elements: housing, job support, health services, integration, and addiction recovery

Shelters and centers should support “family style living” with communal living spaces

Based on research conducted, it is in the best interest of homeless youth with substance abuse issues to provide qualitative care to large groups and “families”

Unaccompanied youth develop “families” on the street in which they depend on for support.

Architectural

Key Claims: Architecture can be a solution to social issues.

Public perception determines the success of the program.

Integrated design within the community fosters neighborly and societal support.

Program is essential to creating qualitative design of homeless shelters

Public integration is necessary for homeless centers to succeed

Dissemination

Key Claims: Logic and comparison of essential elements

Affordability is essential to the development of homeless centers.

Centers should be affordable to build and consist of all main program elements

Money should be allocated specifically to meet the needs of homeless youth

Audience: Architects and investors

outdoor space

This project prioritizes shelter, but should also prioritize providing health services.

Based on all of the research conducted, both quantitative and qualitative data, it has been concluded that the most effective approach of addressing unaccompanied homeless youth with substance abuse through the remediation of architecture can be addressed by implementing the following:

Long-term quality care of large groups. Despite the need to address large quantities of people, it is in the best interest of homeless youth with substance abuse issues to provide quality services that can be accessed over a long period of time. Facilities should be accessible 24/7 and have the ability to take in large groups and “families”.

While on the streets, unaccompanied youth become integrated with other unaccompanied youth. These groups develop characteristics similar to families. The kids often refer to the others as their family and rely on them for external support and social integration. Ultimately, providing services to the entire family is essential to fostering a healthy environment for all of the unaccompanied youth within the group to receive treatment and access to services to alleviate situational homelessness.

The combination of facilities varying in size is essential to integrate homeless youth into the programs.

The use of small, mobile facilities increases accessibility while providing unaccompanied youth with access to information on larger programs where they can receive long-term support and quality care.

The use of medium housing units can be successful when spread throughout the city and incorporated with the larger facility. Through providing access to transportation to the larger facility, accessibility increases and occupants of the housing units can receive transportation to health services. Through alleviating obstacles, unaccompanied youth have an increasing opportunity to use the facilities.

The use of a singular large facility can be successful if all health, transportation, and personal facilities are available 24/7. The facilities must be accessible to large groups and families as well as have overdose and emergency facilities for safety precautions.

Affordability is determined through allocation of materials, resources, and spaces.

Why remediation of architecture?

Architecture serves as the foundational element to addressing homelessness

Most places barely have room for one person but they need places that can take whole groups in, whole families that already have internal support created⁵ 🏠

Accessibility and programs, but creating a home for large families or small groups⁵ 🏠

There are already services but lack funding and support and aren't always open⁵ 🏠

They need identification to work and access to showers and bathrooms⁵ 🏠

They need a place to call home where it feels like home and they are surrounded by people who support them and hold them accountable⁵ 🏠

People need housing for the entire group, not just one individual, preserve the already developed communities and "families"⁵ 🏠

Access to charging stations, water, computers, bathrooms, and recovery centers⁵ 🏠

"Any facility that serves the homeless is located somewhere, and its immediate neighbors and the surrounding community deserve well-designed buildings that fit into the neighborhood, that help residents integrate themselves into the community, and alleviate the concerns of local residents that the facility and its clients will compromise their own quality of life" (pg.ix) 🏠

The placement of architecture within proximity to public transportation is essential to addressing the amount of homeless people. 🏠

Occupant usage of essential services is increased if on-site facilities are available. 🏠

Architectural elements needed to create a successful homeless center:

- Openings to the street way, integration with the street front 🏠
- Use of local materials and construction methods
- Use of local architectural techniques
- Openings and communal spaces 🏠

Program elements needed to create a successful homeless center:

- Communal spaces for meals together 🏠
- Health services, substance abuse, and recovery spaces 🏠

Davis, Sam. Designing for the Homeless: Architecture That Works. University of California Press, 2005.

"The shortage of affordable housing is not the only problem facing many of the homeless." (pg.ix) 🏠

"Any facility that serves the homeless is located somewhere, and its immediate neighbors and the surrounding community deserve well-designed buildings that fit into the neighborhood, that help residents integrate themselves into the community, and alleviate the concerns of local residents that the facility and its clients will compromise their own quality of life" (pg.ix) 🏠

"Everything is there, a restaurant, housing, recreation, and services — is there." (pg.7) 🏠

This book discusses the role of architecture within designing for homeless communities, especially in consideration that affordable housing is not the only need of homeless, but community services and centers as well. Davis describes many examples in which the design and architecture has small elements that may vary based on context, but ultimately serve both the homeless residents and the surrounding community members as well. The author focuses on all aspects included in designing for homeless individuals and communities. Ultimately, this book describes several techniques that can be implements to develop successful projects that focus on the needs of homeless individuals.

Why is this proposal different?

All existing services:

1 static building, or 1 mobile unit. Limited services available depending on mode of architecture.

Proposal

A combination of static and mobile units dispersed throughout the city. Proposal uses double the budget of an existing precedent but is also double the efficiency and coverage, reaching more than double the amount of homeless people.

Variables

Control variables:

- within the Detroit city boundaries
- within .25 miles from transportation
- within 150,000 sq ft
- within \$30 million

Primary variables:

- studying impact and reach
- program in relation to the extent of qualitative and quantitative care provided
- explore how much can be made static, dispersed, mobile, etc?

Secondary variables:

- program type
 - the types of spaces needed
 - the relation between spaces

- Program
1. Outdoor sleeping spaces
 2. Residential Units
 - Lockers
 - Pet shelter
 - Community Spaces
 - Kitchen
 - Living spaces
 - Technology spaces (access to computers and phones)
 - Laundry facilities
 - Postal services
 - Child Care
 - Health Services
 - Overdose center
 - Counseling offices
 - Urgent care/Doctors office
 - Service Spaces
 - Legal Offices
 - Training facilities
 - Security Offices
 3. Mobile Services - approx. 300 sqft

The list of spaces was determined from statements in previous research. All of which came directly from the homeless citizens and people active in the homeless communities.

Site 1: 2640 W Vernor Hwy, Detroit, MI

0.2 miles walking distance from two bus stops

0.2 miles walking distance from Algo Especial Super Market

0.2 miles walking distance from Ford Resource and Engagement Center

Circulation

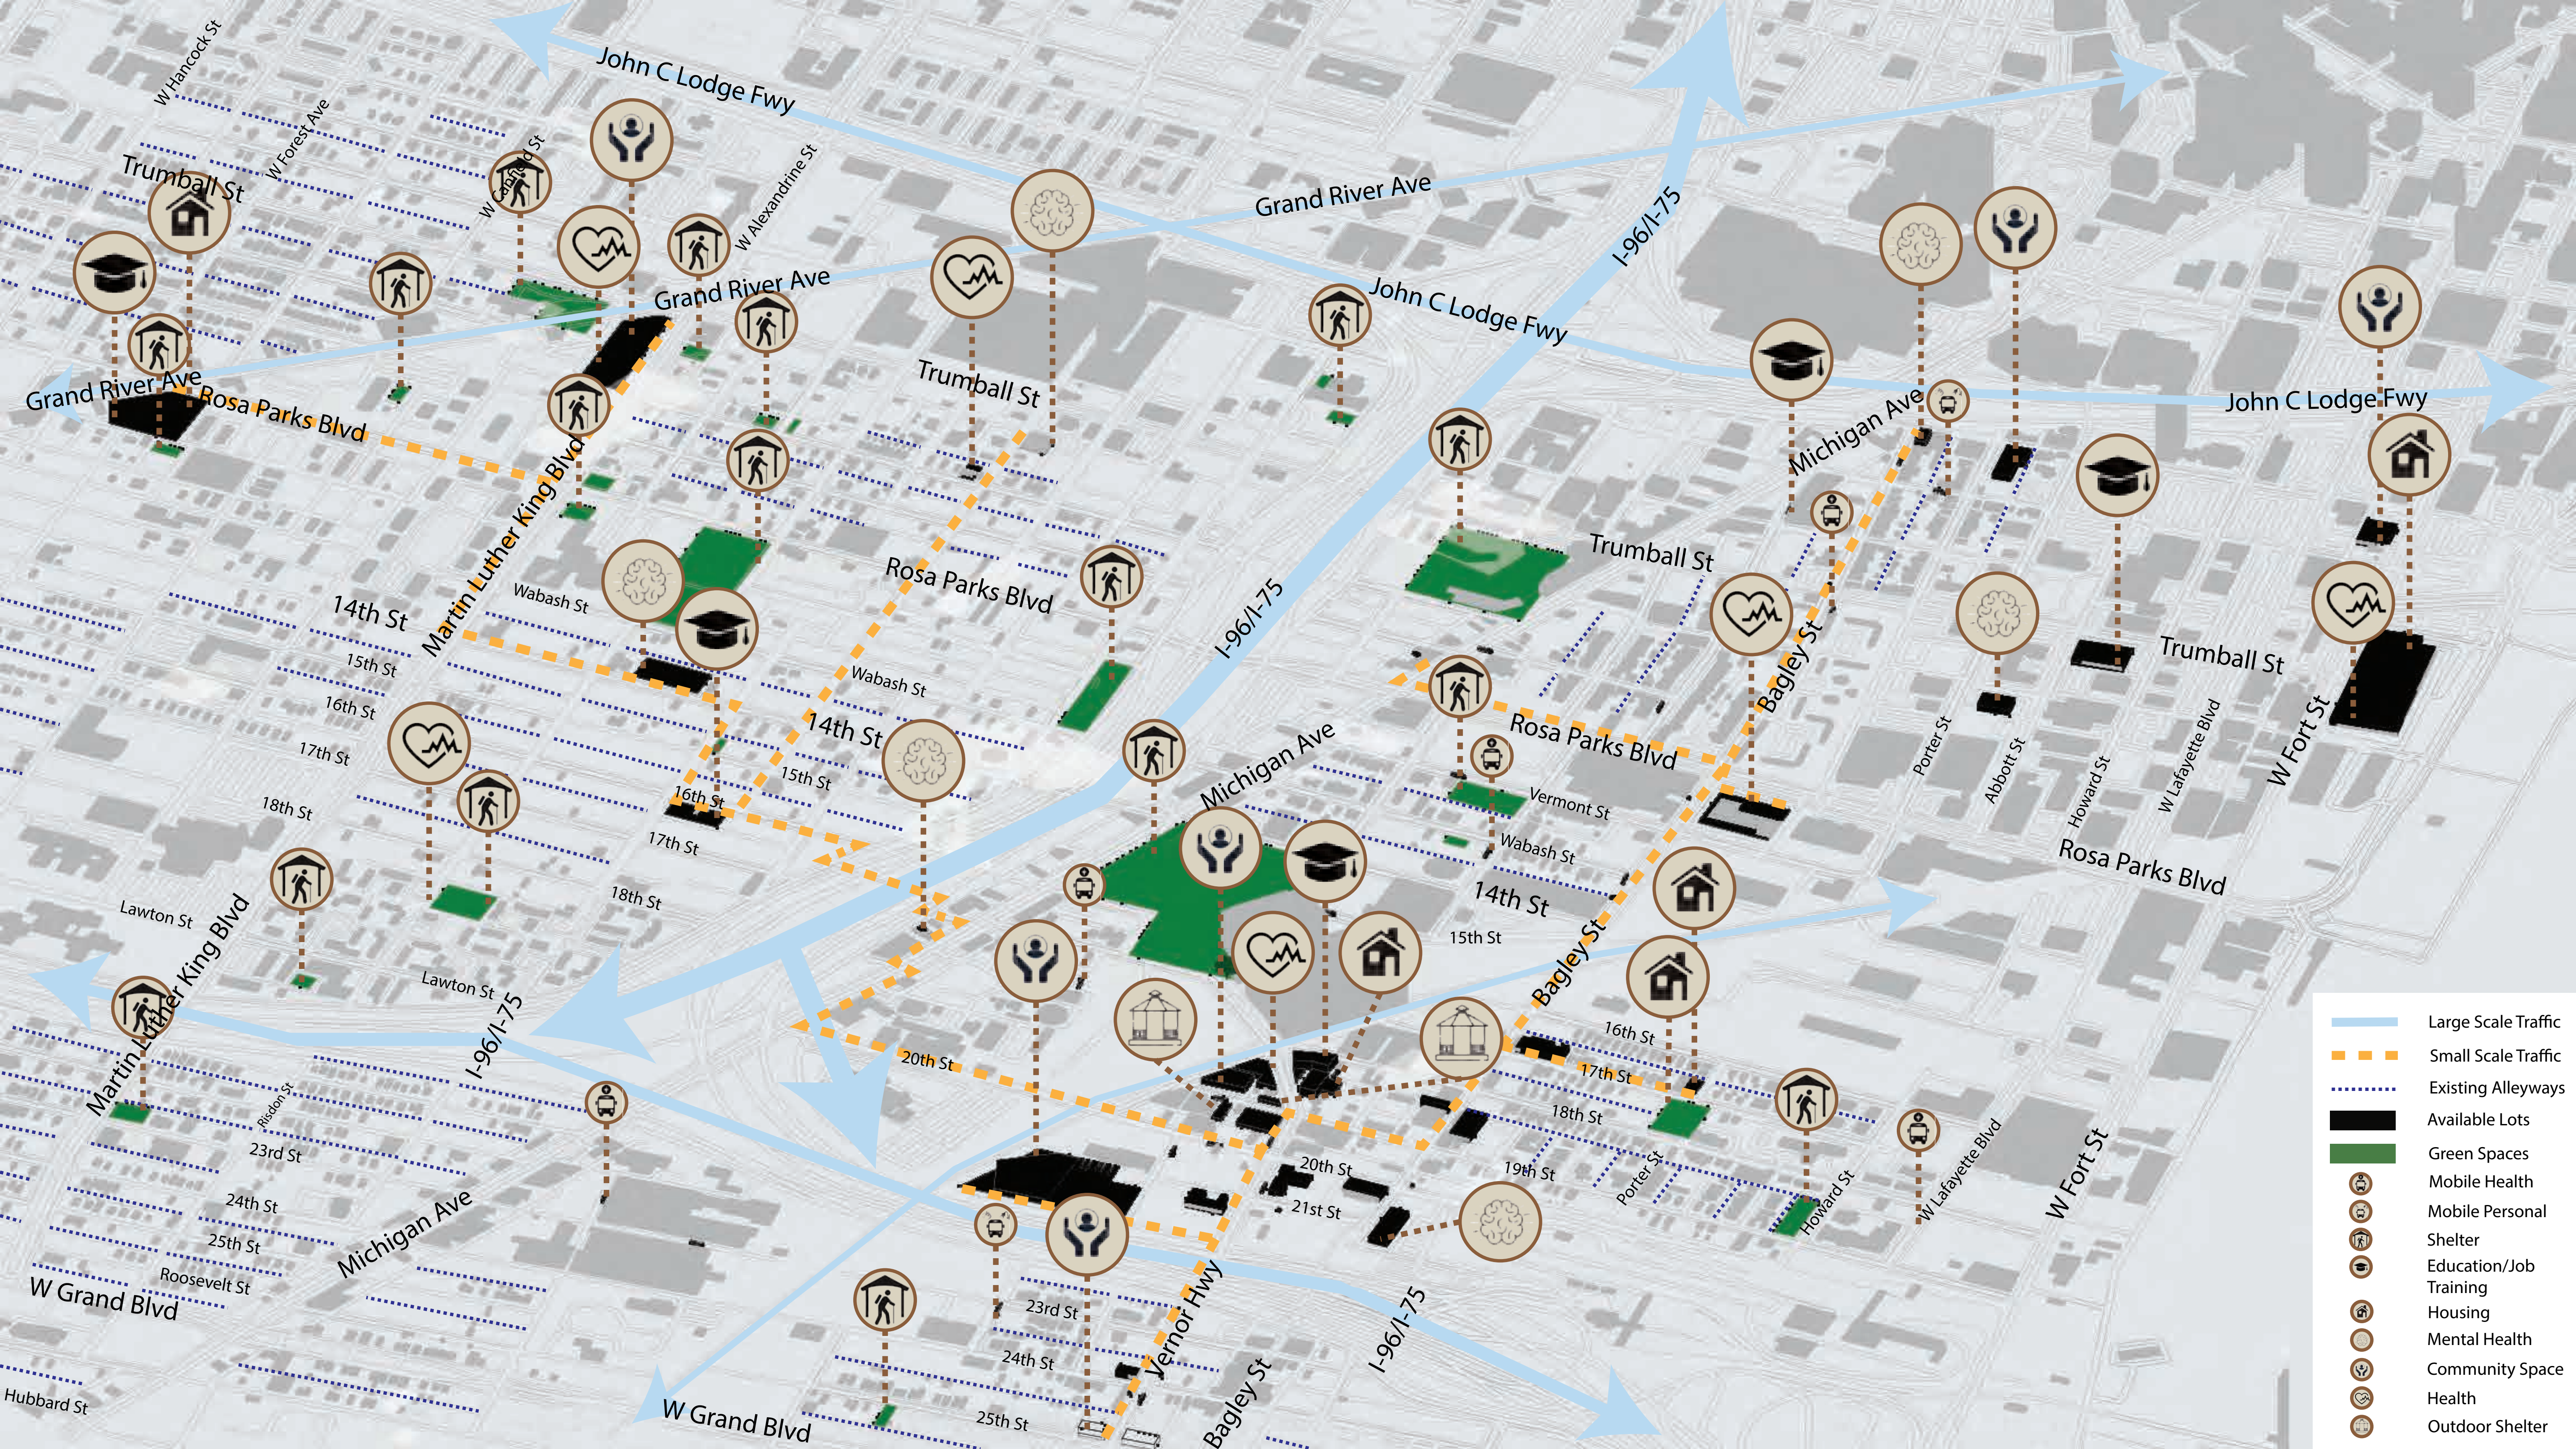

Exterior Elements

Interior Elements

Summer - Day

📍 👥 🍴 Mobile and temporary structures allow for intervention of the homeless cycle for a larger amount of homeless youth. More people can be reached and can be guided in the direction which fits them best. Allows for community engagement and provides food and health services to everyone who needs it.

Summer - Night

🏠 Building indentation, raised platforms, and furniture. Acceptance of transformable furniture; Interchangeable with other transformable street furniture. Building indentation minimum of 6'-8". Allows for coverage from the elements to provide a warm space for people to stay during the night.

Winter - Day

☀️ Vegetation, outdoor furniture and structures, building indentation, and raised platforms to provide coverage from elements such as sun and snow. Raised platforms are utilized to limit exposure to water, such as puddles. Usage of materials, such as brick, that absorb heat during the day and release it at night.

Winter - Night

🏠 Coverage, heat, and lighting to provide a safer environment for those who may utilize the space at night. Usage of materials, such as brick, that absorb heat during the day and release it at night. This provides heat and coverage to individuals who may need to use the space at night.

Summer - Day

 Elements in which create a soft barrier between spaces to outline campus spaces designated for homeless people. Vegetation and furniture are used to emphasize the boundaries of the campus and help guide individuals to designated campus spaces.

Winter - Day

 Revitalization of existing pathways. Connects spaces and allows for access across the campus. Improves accessability to services and facilities.

Summer - Night

 Acceptance of transformable furniture; Interchangeable with other transformable street furniture. Majority of transformable furniture options transform into covered, outdoor sleeping spaces. Furniture is usable by the community and homeless. Emphasizes the spacial differences at various times of day/night (i.e. community space during the day, safe, outdoor shelter at night for the homeless community)

Winter - Night

 Coverage, heat, and lighting to provide a safer environment for those who may utilize the space at night. Based on previous research, several documentaries highlight the necessity of lit spaces to limit dangerous incidents and coverage to provide shelter from elements. A majority of homeless individuals also struggle in finding warm spaces to stay during extreme cold weather.

Summer - Day

Pop-up events and temporary facilities provide medical care and personal services, such as showers, to members of the community, especially homeless youth. Research shows that these events and facilities allow for large amounts of homeless people to be helped.

Winter - Day

Mobile and temporary structures allow for intervention of the homeless cycle for a larger amount of homeless youth. More people can be reached and can be guided in the direction which fits them best. Allows for community engagement and provides food and health services to everyone who needs it.

Summer - Night

Coverage and lighting to provide a safer environment for those who may utilize the space at night. Based on previous research, several documentaries highlight the necessity of lit spaces, to limit dangerous incidents, and coverage, to provide shelter from elements.

Winter - Night

Convertible furniture, indentation of building entryways, and raised platforms are transformed from community based spaces during the day to spaces designated for homeless people at night. Popup shelters can be used as seating during the day and individual sleeping spaces at night.
