

SafeConnect Authentication & Security Key Installation Instructions

In order to make LTU's network environment as secure and safe as possible, LTU uses an authentication service for our LTU Network Wi-Fi and our hardline networks across campus. SafeConnect has been in production on our wireless network for over 5 years, protecting our network and devices from potential threats (including malware, viruses and nefarious hacking), and has been adopted as a secure method for using the internet across all connections types.

LTU-provided devices should already have the component required to access the internet on campus. You will periodically have to re-authenticate the device. To do so, just open an internet browser, and navigate to a non-secured website (i.e., <http://www.michigan.gov/>). Your browser should automatically re-direct you to the SafeConnect portal: <https://auth.impulse.com:8443>. Just enter in your normal LTU network/computer credentials and submit. As long as your credentials are correct, you will be presented with LTU's main website. You can now browse the internet as normal.

If your computer does not already have the client installed, your internet browser should automatically redirect you to the SafeConnect portal (<https://auth.impulse.com:8443>). Please follow the instructions below.

Please sign in with your normal network/computer credentials (see picture below).

NOTE: If your computer already has the policy installed, you will redirect automatically to the main LTU website (<https://www.ltu.edu/>). Your device is ready to browse the internet.

Your browser will display the page below. Please follow the instructions to complete the Safe Connect installation.

Lawrence Tech.

Install Policy Key

In order to ensure a safe environment for all users of the network, we require that certain devices install the Policy Key.

The Policy Key validates that your system meets the network's security standards as per the school's [Acceptable Use Policy](#).

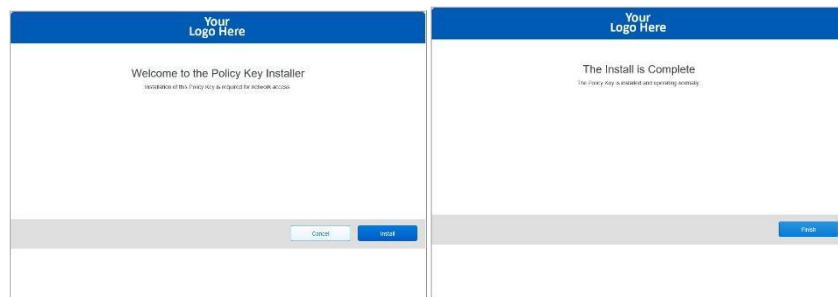

[See the FAQ](#) for more information about the Policy Key.

Follow the instructions below to complete the installation.

- 1 Save the file to your preferred directory.
- 2 After the download is complete, navigate to the file and run it.
- 3 Follow the instructions on the installer.
- 4 Click "I'm done installing" below.

I'm done installing

Next, double-click the file downloaded. If you are prompted, please allow the installer to run.

Once installed, you should then be able to access the internet as normal. If you have any questions, concerns, or need assistance installing, please contact the Help Desk at helpdesk@ltu.edu or 248-204-2330.
